

## PATIENT CHECKLIST: PREPARING FOR HYPERPARATHYROIDISM EVALUATION

---

To ensure Dr. Harding can provide a complete and accurate assessment, please review and complete the following checklist before your appointment request is confirmed

**REQUIRED LABORATORY TESTS:** Please gather and submit the following lab results. Missing lab results may delay your evaluation

- ☐ I have had prior neck surgery
- ☐ All recent INTACT PARATHYROID HORMONE (PTH) LEVELS
- ☐ recent TSH THYROID FUNCTION TEST
- ☐ recent FREE T4 THYROID FUNCTION TEST
- ☐ 24-HOUR URINARY CALCIUM LEVEL

**IMAGING AND LOCALIZATION STUDIES** (if available): Please provide any of the following studies that have already been performed

- ☐ I have had prior neck surgery
- ☐ Tc99 Sestamibi scan (Parathyroid scan)
- ☐ CT scan or MRI of the neck

**Actual Images are Important:**

Dr. Harding must review the **actual image files**, not just the radiology reports. Patients are responsible for obtaining these images from the radiology facility and bringing them to their appointment. If left with our office, patients must also arrange to pick them up afterward.

**Surgical History** (if applicable)

- ☐ I have had prior neck surgery
- ☐ I have submitted operative reports and any available pathology reports

**What to Expect at Your Visit**

- Dr. Harding will perform a **comprehensive in-office ultrasound** as part of your evaluation.
- This may help reduce the need for additional imaging and lower your overall medical costs.

This checklist ensures your evaluation is efficient, accurate, and tailored to your condition. If you're missing any items, our team will guide you through the next steps.
